

Community Garden Project Report

A small test document for document parsing and RAG ingestion.

1. Project Overview

The Riverside Community Garden began in April 2026 as a small neighborhood project. Volunteers prepared unused land beside the community center and planted vegetables, herbs, and flowering plants. By June, the garden had become a regular meeting place where residents could help maintain the plots and share fresh produce.

The project currently focuses on keeping the garden easy to maintain while encouraging more residents to participate. Weekly watering and maintenance sessions are held every Saturday morning.

2. Weekly Garden Activities

- Check soil moisture in each planting area.
- Water vegetables and newly planted seedlings.
- Remove weeds and clear fallen leaves.
- Record harvested produce in the garden log.

3. Garden Layout

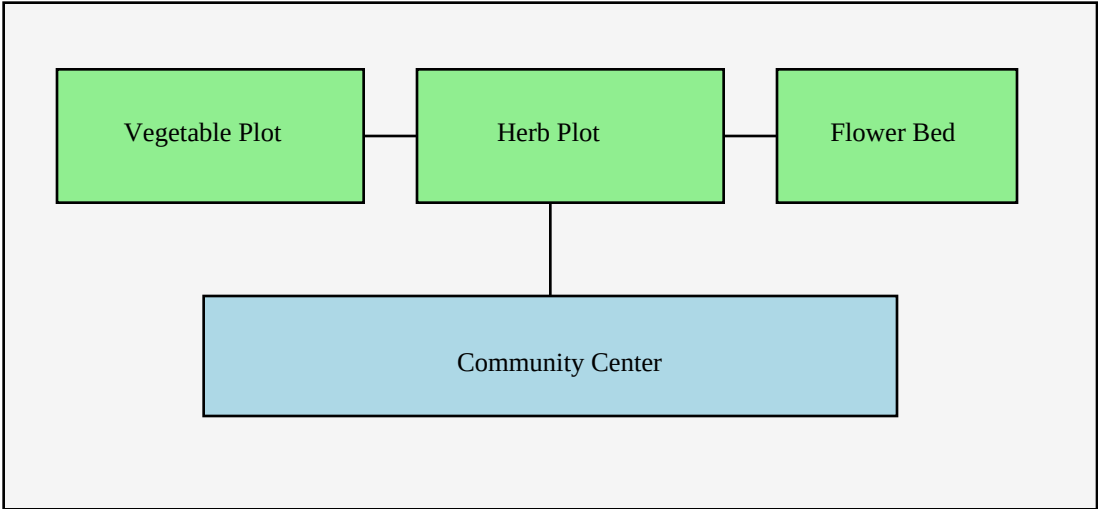

Figure 1. Simplified layout of the Riverside Community Garden, showing the main vegetable, herb, and flower planting areas around the community center.

4. Monthly Harvest Summary

Month	Tomatoes	Lettuce	Herbs	Total
April	12 kg	8 kg	3 kg	23 kg

May	18 kg	11 kg	5 kg	34 kg
June	24 kg	15 kg	7 kg	46 kg

Table 1. Harvested produce recorded by volunteers during the first three months of the project. Values represent the approximate weight collected.

5. Notes

The harvest records are maintained by volunteers and may be updated when additional produce is weighed. Future reports will include information about water consumption and the number of participating households.
